

Prime Wizard

This is our program that we installed in Kodi that does three special Tasks

1) Keeps Kodi running smoothly. Every time you enter Kodi, Prime Wizard deletes cached data (junk data), and closes any apps left running. This frees up the memory and allows Kodi to run better - faster and smoother.

2) Allows you (the user) to update Kodi from home. You won't have to bring the android box back to our store. When you enter Kodi, it will notify you when an update is available. Should you choose to do the update, your android box will be as up to date as the one we have on display in our store.

3) Add Android apps to your Android menu to stream movies and shows without using Kodi. Just like Kodi, these apps won't last forever. They have to be updated or replaced with new ones, so you can go to Prime wizard and install and update these apps from home.
